

Gotoh 510 Bridge Diagram

This is a combination tune-o-matic and stop tail piece bridge. This sleek and compact bridge is an ideal mate for our VIP and LPS carved top bodies. This bridge has a string spread of 2-1/16" (52.39mm). A neck pocket angle of 1-1/2 to 3 degrees is necessary for proper operation. Because of the way the strings wrap around the bridge, it is best suited for carved top body applications. We can rout the correct angle in the neck pocket for just \$10.00, and we can also install studs in the body for just \$10.00.
