

Original Floyd Rose Tremolo Diagram

There are many bridges made under Floyd Rose patents. Unfortunately, their physical dimensions are not uniform. We only offer routing for the original Floyd Rose tremolo and for the Schaller Floyd Rose tremolo, both of which we sell.

This bridge features hardened steel throughout, a removable tremolo arm and original saddles for plain-end string anchoring. This bridge has a string spread of 2-3/32" (53mm).

Dimensions in Millimeters

There are several stud options available. If you supply us with your studs or buy the bridge from us, we will install them for just \$10.00. Wood screws are still provided by some vendors. Warmoth only provides the stud/insert mounting system with this bridge.

The standard, non-recessed, Floyd installation sits quite high on the guitar and necessitates angling or shimming the neck pocket 2 degrees for proper operation. We can rout the correct angle in your neck pocket for just **\$10.00**.

(Non Recessed) Standard Floyd Bridge Rout

The alternative mounting is called recessed routing. This allows the bridge to sit lower, down into the body. Both up and down action are still possible. We offer recessed routing for both the original Floyd Rose and Schaller tremolos. Please specify which bridge you have as they are not interchangeable.

Recessed Floyd Bridge Rout
